Abstract (en)

[origin: WO9514819A2] A process for producing a two-layered asphalt coating from two types of ready-to-use mixes should increase the total strength of the structure and optimise the composition and properties of the asphalt covering. For that purpose, the top layers of the asphalt fortification are hot poured in a single operation. A process is disclosed for producing a two-layered asphalt covering that optimises the properties of the asphalt layers.
