Abstract (en)

[origin: EP0730956A2] The roller is mounted in levers rocked by the shaft, which works in fixed bearings in the frame. The coupling (20) between the shaft and the levers is situated at the centre (23) of the machine. On the shaft (12) there can be a concentric supporting tube (17) for the levers (10) and one or more control levers (11), and which is coupled to the shaft. The tube can comprise two concentric sleeves working in bearings (18), and each coupled to the shaft at the machine centre. The control levers can rotate with the tube, being coupled to those (10) accommodating the inking roller (7).
