Abstract (en)
[origin: EP0730957A2] The drive cogwheel (2) is connected to the drive of the printer. The drive is transmitted from a drive gearing (5) on a shaft (3) carrying the drive cogwheel via one or more planetary wheels (12) movable on a circle round the shaft, to a driven element (7). The planetary wheels move between the drive gearing and an internally clogged hollow wheel (14) adjustably fixed in its rotary position by the adjustment.
