Abstract (en)

[origin: EP0731222A2] The tap incorporates an assembly (6) with outlets tilting on the portion (3) fixed to the wall. The outlets are both covered by a cowl open to the underside. The pivot axis can be formed by a head of cylindrical cross-section connected to the water inlet and by passages to the outlets (5). The assembly can be guided in the axial direction of its head in the fixed portion, while it is held in the working position by locking devices or the cowl (7).
