Abstract (en)

[origin: EP0731226A2] The frame of the wall section comprises hollow profiled vertical members (3) held apart by one more hollow profiled cross-struts (4) forming the corners. The member ends form close-fitting sockets for the bosses of corner connectors (8), which can be L-shaped with their arms at right angles. Stop faces can be provided on the bosses, against which the member endfaces fit closely. There can be fixing devices on the bosses engaging detachably with the members to prevent relative movement. The connectors can also accommodate hinging fixing lugs engaging in openings in C-section rails.
