Abstract (en)

A guard rail support bar (4) is fixed under a slab (1) by a fixing section (14) under the slab. The section upper part (17) is applied under the slab lower surface (18) and fixed there by a screw (25). When the support bar is vertical the front end of the section is at the slab head (2). An end piece (15) which is mounted at the fixing section front end has a convex external surface (29). A shoe (16) having a concave base, complementary to the end piece convex surface, has an upper part (31) which fits into and fixes the support bar base. A bolt and washer (32,33) fix the shoe through its concave base against the end piece. In the case of an inclined support bar, particularly when a gutter must be placed in front of the slab head, the fixing section is positioned so that its front end, and consequently the end piece, are located in front of the slab head.

Abstract (fr)

Ce dispositif de fixation sous dalle (11) est destiné, plus particulièrement, à un barreau-support (4) de garde-corps de balcon. Un profilé (14), sensiblement horizontal, est appliqué par sa partie supérieure (17) sous la face inférieure (18) de la dalle (1), et y est fixé par au moins une vis (25). L'extrémité avant du profilé (14), située sensiblement au niveau du nez de dalle (2), porte une pièce terminale (15) possédant une surface extérieure convexe (29). Un sabot (16), possédant une embase concave (30), est fixé contre la pièce terminale (15) au moyen d'une autre vis (33). La partie supérieure (31) du sabot (16) reçoit la base du barreau-support (4). Un réglage en toutes directions de la position du barreau-support (4) est ainsi aisément réalisable. <IMAGE>
