Abstract (en)

[origin: EP0731241A1] Two fixture holes (8,9) are positioned on each side of a tubular neck (19). A metal reinforcement plate (21) has a hole (22) esp. in the centre of it and through which goes the neck of the round anchor plate. At least one radially protruding catch (24) on the neck grips over the edge of the hole in the reinforcement plate, in a locking position. The catch is in the form of a wedge-shaped lug protruding beyond the outer casing of the neck.
