Abstract (en)  
[origin: EP0731434A1] This self adhesive label for cylindrical or prismatic vessels has a separable section (2). On the opposite end is a region (3) with a non-adhesive smooth layer. The label is original in having a pref. triangular incision (8) at the edge of this region. Pref. the incision is near the edge line (7) between the region and the centre section (10) of the label, its function is to assist lifting the corner of the separable section. The height (h) of the separable section is smaller than the height (H) of the rest, and it consists of a single self adhesive layer. The smooth layer is a silicon varnish, applied by printing. The separable section is perforated (6). Proportion of the label and its parts are further detailed.
