Abstract (en)

[origin: WO9610510A1] An inner lining for gangways between wagons of rail vehicles consists of side leaves made each of at least two independent frames (1, 2, 3) whose sleepers are interconnected by hinges (7) at their corners. The frames are held in bottom and top telescopic guiding rails (4). When the outermost frame sleeper is fastened by hinges (8) to the body or coupling frame, the inner lining can follow all movements of the wagons.
