Abstract (en)

[origin: WO9515440A1] The subject matter of the invention is a low-complexity device for preventing turbulence arising at the base (6) and rear wall (3) of the inlet chamber (1) of a centrifugal pump. The device has a ridge (7) of any cross section running along the base (6) of the inlet chamber (1) and passing through the extended central axis (9) of the pump inlet (4). The height (h) and width (b) of the cross section and of the segments ( $x_1$  and  $x_2$ ) thereof on either side of the extended central axis (9) of the pump inlet (4) are defined by reference to the diameter (D) of the pump inlet (4) as follows: a)  $0,055 < h/D < 0,29$ ; b)  $0,045 < b/D < 0,39$ ; c)  $0,45 < x_1/D < \text{INFINITY}$ ; d)  $0,45 < x_2/D < \text{INFINITY}$ .
