Abstract (en)

[origin: EP0732246A1] The support arms are arranged between the frame and the front and rear under-carriages and are located on the frame pivotably around a vertical pivot axis. The pivot axes (10) of the support arms (8), when viewed in the travel direction, are arranged in the area of the half length of the vehicle (1). They are also arranged one behind the other, and have the same length. The pivot axes of the support arms are displaced from the vehicle side to the centre of the vehicle. Two front and two rear under-carriages are provided and the length of the support arms is so selected that the front and rear under-carriages, viewed in the direction of travel, are arranged next to each other on a straight section of the rail (2).
