Abstract (en)  
[origin: EP0732267A1] The commissioning system uses transport containers (1) moved along a conveyor, with a co-operating printer (3) above the conveyor, for marking each container via a printed label (8). This is fitted into a reception pocket (5) at the upper edge of the container and removed for checking the container contents via a suction device. Pref., the printer has a vertically spaced delivery device for insertion of the printed label in the container pocket, with corresponding vertical displacement of the suction device for removal of the printed label.
