Abstract (en)

[origin: EP0732275A1] The package consists of a tray (1) which receives a perforated false bottom on which the feed product rests, and a film covering layer. The false bottom rests on a series of ribs (8a - 8h) projecting from the surface of the tray which give it rigidity and allow for the collection of fluids exuding from the food product. The ribs are positioned, for example, so that their tips lie perpendicular to the sides of the tray, and at least some of them are linked to form closed cavities. The tray is made from a thermoplastic material such as polystyrene, polyethylene, PVC, PET, and the film covering can be of polyethylene, thermo-shrink polyethylene, PET or similar.
