Abstract (en)

[origin: EP0732290A2] The device has a horizontally and vertically movable table (1), with front and rear sections (3,2) to hold the cut stack (16). The front section is fastened pivoted to the rear section, and is moved by a driver (10) between two end positions (8,9). In the first end position, the table tops (4,5) of both table sections form a horizontal surface. In the second end position, the top of the front table section is pivoted away from the top of the rear section. The front table section is pivoted pneumatically between two end stops, through an angle of less than 10 deg. There are front and rear stops (15,14) for the cut stack.
