Abstract (en)
[origin: EP0732512A2] The piston-cylinder unit has a valve connected to at least one cylindrical cavity. The valve casing (1a), which carries an electromagnet (3), forms a unit casing (5) with at least one cylindrical tube (4). The valve seat (6) and piston endface (7) are connected to each other by a common cavity (8). The casing may be manufactured in one piece. The cylindrical tube has its longitudinal axis (4a) perpendicular to, or in the same direction as the operating device (9) of an electromagnetic valve (10). It may be possible to alter the ID of the cylindrical tube by means of tube pieces (11).
