Abstract (en)
[origin: WO9516085A1] A weathering member (3) is positioned beneath the form between two adjacent tiles (1) on a roof, to catch water passing between them and feed it onto a tile (1) in the row below. The weathering member has upstands (8) which engage in recesses (10) in the under surfaces of tiles (1). Locating means (6) for the tiles (1) consist of a portion (11) passing between the tiles and a head (12) which engages the upper surfaces of the tiles. The weathering member (3) is attached to a roof batten (13) by means of a pair of legs (15) with portions (19) which engage the batten. In alternative arrangements a clip or a nail is used to secure the tiles to a weathering member and the member to the batten.
