Abstract (en)
A pivoted button including a head (10) with an axial tubular stem (14) ending with an annular edge (15) that is folded outward and is retained by the edge (16) of a hole (17) provided on a disk-shaped base (18) cooperating with a clawed ring (23) for fixing to the fabric (25). The fabric (25) is arranged between the disk-shaped base (18) and the clawed ring (23) and the claws (24) penetrate the fabric (25) and clinch themselves in a recess (22) of the base (18) by compression. The button is characterized in that the region (14a) of the tubular stem (14) that is retained by the edge (16) of the hole (17) of the base (18) is limited not only by the folded edge (15) but also by a portion (14b) of the stem (14) that is raised with respect to the rest. <IMAGE>
