Abstract (en)

The coat-hanger is held inside the luggage by a support (3) which is fixed to the luggage wall. A central peg (1) carries the coat-hangers. A cover (2), constituted by a wall (20) edged with two side panels (21,22) can rotate between an open and closed positions. When open it totally uncovers the central peg, and when closed it covers most of the peg. When closed the cover forms with the peg a space enclosed by the upper, lower and side walls. The central peg has a foot (10) limited at its ends by two walls sticking out perpendicular to its axis which constitute a head (11) and a base (12). The upper part of the foot wall is cylindrical with a radius similar to that of the coat-hanger hook.

Abstract (fr)

Le dispositif comporte : un support (3) par lequel il est fixé sur une paroi du bagage, un pion central (1) destiné à porter les cintres, un couvercle (2) monté mobile en rotation entre une position dite ouverte pour laquelle il découvre totalement le pion central (1) et une position dite fermée pour laquelle il recouvre en grande partie ledit pion central (1) de manière à former avec ledit pion central un espace fermé par des parois supérieure, inférieure et latérales. <IMAGE>
