Abstract (en)

The present invention relates to a support (10), particularly for felts or rubber pads (14), or sliding blocks (15) adapted to be fixed to the bottom of the legs or feet of furniture, chairs, or the like. The support (10) is constituted by a metal plate (11) wherefrom two or more points (12) protrude in positions that are eccentric with respect to the centroid of the plate (11). The points (12) protrude substantially at right angles to the plate (11), from a face thereof which is opposite to that associated with the felts or rubber pads (14), or sliding blocks (15). The points (12) penetrate in the bottom of the legs or feet of furniture, chairs, or the like upon assembly, and a rim (13) circumscribes the plate (11), and surrounds the felt or rubber pad (14), or sliding block (15). <IMAGE>
