Abstract (en)

[origin: EP0733562A1] The positioning appts. involves a pivot arm (3) which has a radius of action of several metres and is terminated in a head (4) carrying a plate (9) with sensors (13) grouped in accordance with the pattern of metallic markings on the object to be grasped e.g. a refuse bin and lifted into an opening in the side of the vehicle. The head is manoeuvred e.g. by using a joystick in the driver's cab. The range and bearing of the object may be measured with an ultrasonic pulse echo transmitter and receiver.
