Abstract (en)
[origin: EP0733569A2] The winding device is for a web of paper, foil, plastics etc. has a roller (4) contacting the surface of the forming roll (5), and a device (43-54) to remove the wound roll and at the same time transport at least one new winding shell (57) for the next rolling process to the rolling point (7). The device has a casing (43) which can turn round the roller (4) contacting the forming roll during the rolling process. The casing is crescent-shaped in cross section. It has a carrier (50) which folds up to close the casing, and a device (52) to move components relative to the casing.
