Abstract (en)
[origin: EP0733746A2] The holder unit comprises a fastener which is screwed to the wall, and a holder for the rail. The fastener (3) has a toothed section (8) with parallel teeth which are at right angles or inclined relative to the rail (2). The end of the rail is connected to the fastener shoulder (12), with tothing (13) which is complementary to the fastener tothing. A connector (15) has a holder (16) for axially moveable accommodation of the fastener shoulder. Fastener elements (19,20) move the connectors towards the fastener, and connect the two.
