Abstract (en)

[origin: EP0733749A1] The device comprises an operating key (21,22) in a housing. The cistern cover (2) has a holder element (4), which projects partially into the cover interior (11). The housing is formed as a plug (6), and this is directly connected to the holder element. The holder element has a shoulder (5), which is at least partially ring-shaped, and projects into the cover interior. Holder element and plug have corresponding surfaces (10,12), which engage with press fit closure. The plug locks automatically in the holder after insertion.
