Abstract (en)

[origin: DE4444093A1] A flange (33) is located between support (26) and bogie (30), and there is a first joint between bogie and flange, and a second joint between flange and support. At least one joint has a pair of rolling surfaces (37,38), with one each on the flange, and one on bogie or support. One of the engaging rolling surfaces is cylindrical, and the contact line between a pair is linear. When the rolling surfaces of one joint move, the support is pivoted in one plane, and is then moved at right angles to this plane by the other joint.
