Abstract (en)

[origin: WO9517024A1] An electrical connecting device comprises two conical connecting elements, each of which is arranged to receive a respective conductor of a coaxial cable for example. At least one of the connecting elements is provided with a ring of solder, and the elements are enclosed within a heat-shrinkable sleeve. A termination member extends from each of the connecting elements to the exterior of the sleeve for connection for example to a printed circuit board.
