Abstract (en)
[origin: EP0734671A1] The carrier has support (1) to be strapped on by the user and has, on its front face, a latch frame (5). An independent base (7) engages a ventral section of the carrier and a dorsal section which each receive a female section (6) which can be brought into engagement with the latch frame to assure retention of the base w.r.t. the support and allow reversal of the base if required. The front face of the carrier can receive a vertical strip to receive the latching frame. The latter has a rigid support of extended length.
