Abstract (en)

[origin: EP0734776A1] The nozzle has a housing (1) with intake and outlet (2,3) for cleaning fluid, and an internal rotor (4) with nozzle (6), through which the fluid flows. The side of the rotor facing the outlet is sleeve-shaped, and its end is born ball joint-like on a bearing sleeve (8). The dished bearing (7) for the internal rotor nozzle is located concentrically in the bearing sleeve, and the rotor has internal driver surfaces for the stilt (5), in which the internal rotor nozzle is located. The ball joint has convex and concave surfaces, located on bearing sleeve and rotor, or vice versa.
