Abstract (en)
[origin: EP0734859A1] The device exchanges printing plates on the cylinders of printing presses. It uses a pivoted plate loading unit (2) with a feed chamber and a removal chamber. The unit is not only pivoted in a working position by the channel (17) of a cylinder (12) with clamps (1) but also in a loading position, in which the unit is pulled back from the working position. The unit pivoted in a vertical loading position is pivoted to a holder (5) on which an intake region (13) is provided for a printing plate (14) to be removed from the cylinder and guide devices (6) for a plate to be mounted on the cylinder.
