Abstract (en)  
[origin: EP0734860A1] In a device for loading printing plates onto the printing plate cylinders of printing presses, the cylinder has a holder assigned to the leading edge in a hole. This provides a gripping device for the reception of the front edge of the printing plate in the form of a gap extending across the format width. A pivoted holder (103,109) removes a first printing plate (111) and also mounts a second printing plate on the cylinder (101). The holder has a projection reaching to the surface of the printing plate cylinder and has a pivot (119) at one end. It has mounting elements (105,106) on both sides.
