Abstract (en)
A quickly installed protection system (11) comprising, when opened into its operating position, at least one upwardly open box-shaped cell (12) or region defined by walls and connectable to other box-shaped cells or regions, in which the longitudinal, transverse and base walls of the at least one cell are formed of a material of high-strength textile type, on at least one pair of mutually opposing said walls there being provided supporting reinforcement elements. The textile material can be natural or synthetic, and the supporting reinforcement elements can be of any shape, such as rib, rigid or foldable bar etc., so as not only to be able to support the edge of the structure during its filling but also to enable the structure to be folded. <IMAGE>
