Abstract (en)

A device to facilitate the shuttering of concrete bands and lintels which is fitted directly on to the edge of the wall -11- and clamped to it on both sides, and comprising two identical matching elements formed by a tube -1- and a T-shaped section -2- which are welded together. Said tubes -1- have a rod -6- through them secured by a clamp -8- on the outside and at both ends of said tubes. Said clamps can be adjusted so that the assembly is firmly installed on the wall -11-, allowing the shuttering for the bands -10- to be formed inside. <IMAGE>
