Abstract (en)
[origin: EP0735222A1] The invention relates to a kind of hinge for providing adjustment of the position of the door relative to the frame whilst the door is in position and supported by the hinge. The hinge comprises a frame attachment means (3,4) for attachment to a door frame, a door attachment means (61) and a spindle (2) attached to the frame attachment means (3,4). The spindle (2) includes an axially eccentric central portion (5) to which the door attachment means (61) is rotatably mounted and also a means (9,81) for preventing rotation of the spindle when it is attached to the frame attachment means. <IMAGE>
