Abstract (en)

[origin: EP0735228A1] The console (1) for mounting roller blinds is in the shape of a square plate with a hollow centre. There are two housings (23,24) in the shape of runners symmetrically placed on the side of the console. These runners receive a removable leg (5) which projects from the lower side of the console and is encastred in a housing on the blind runner. A ring located inside the plate has several bosses (12-15) on its internal wall for the mounting of a fixed flange (2) and/or an operating support platform. Several notches (16,20,25) and lugs (21) on the periphery enable fixing of a finishing cover (6) and a tulip (4).
