Abstract (en)

[origin: EP0735419A2] A method for development processing a silver halide color photographic material comprising a support having thereon a magnetic recording layer, wherein the conductivity of a final processing solution of the development processing is 0.1 mS/cm or less; the calcium concentration in a final processing solution of the development processing is 5 mg/l or less; or the adhered amount of a final processing solution remained on a surface of the photographic material on which the magnetic recording layer is provided after development processing is 0.3 ml/m<2> or less.
