Abstract (en)

[origin: EP0736458A1] The envelope has two parallel fold grooves (10,11) for folding the flap (4). The back (9) of the envelope and the fold grooves are formed and positioned so that the closure flap, when folded along the first groove (10) rests on the inner surface of the front (8) of the envelope beside the back of the envelope. The part (15) of the flap covered with an adhesive layer (14) is coated with a separating agent (16). The closure flap when folded over the second fold-groove (11) rests with the entire layer of adhesive on the outside of the back of the envelope to which it sticks.
