Abstract (en)
[origin: EP0736460A1] The invention provides a combination (21) of a substantially prismatic can (502) and a lid (503), which can comprises: a bottom; a standing wall (506) connected to said bottom along the periphery thereof; and a ring (507) which defines an opening to be closed by the lid, which ring is fixedly connected with a beaded edge (9) to the free end edge of the said wall and further comprises: a first part (510) connecting to the said beaded edge and co-acting sealingly with the inner surface of the wall; a second part (511) connecting at an acute angle to said first part; and a third part (512) connecting to said second part and extending outward in at least more or less longitudinal direction; which three parts bound a peripheral recess; which lid comprises: a central part; and an axially extending peripheral part (514) which fits into the said peripheral recess and co-acts clampingly and sealingly with at least said third part. <IMAGE>
