Abstract (en)
[origin: EP0736651A1] The floor plate (4) of the container (2) forms the platform for the mast (20) in the operative condition. One side wall (8) of the container can be folded away. There are support devices (26,28) which can be moved outwards connected to the floor plate of the container. The fold-away side wall is fixed with a link to the floor plate of the container and is reinforced with struts (14,18). In the corners of the platform tensioning cables (4,6) for the mast in the operative condition are fixed. The special arrangement of the side wall makes it possible that the container or flat, despite the link (126), can be stacked.
