Abstract (en)  
[origin: EP0736660A1] The cover, in the form of a flat rail, covers a cavity (13), in the form of a longitudinal groove, in the threshold body (11) and is fixed to it by snap-in connection. A fastening (15) in the threshold cavity secures the locked-in cover detachably in a first position, or practically non-detachably in a second position. The cavity contains several spaced part fastening points (16). The cover has a first fastening protuberance (18) supporting a locking protuberance near the cover plate, and has a second fastening protuberance (20) supporting a locking protuberance near the base (19) of the cavity.
