Abstract (en)

[origin: EP0736741A1] The detonation device has a striker (2), a ram lever (1) and a control slide valve (3). There is a transmission device (4-9) between the slide valve and the lever, by which the motion of the control slide valve induced by the explosion pressure of a detonated cartridge is transmitted to the ram lever. There is a triggering device (10) by which the ram lever can be blocked. The transmission device consists of a control rod (4), control cam (5), control shaft (6) and rocker (7), with the cam, shaft and rocker fixed to each other; and possibly also a cocking piece (8) and a cocking device (9) to act on the rocker.
