Abstract (en)

[origin: WO9610965A1] Novel device in the field of hygiene and health for relieving mild bladder incontinence in females. The device, which is inserted into the vaginal cavity, consists of two half-shells hinged about a common location and engaging through a series of cooperating male and female joining edges. The device comprises a series of vertical ribs or openings, whereby secretions are discharged, and a series of horizontal ribs, facilitating gripping. The device of the invention is suitable for the physiological treatment of effort-related incontinence.
