Abstract (en)

[origin: WO9519275A1] Lifting arrangement (1) having a linearly extendable lift beam (2), in the centre of the arrangement journalled for pivoting movement to both sides in a vertical plane, through connection arms (10, 10') connected to a resp. support member (3, 4), the support members pivotally attached to opposing side areas of the arrangement for pivoting movement in a vertical plane and to a resp. side of the arrangement. Said lift beam and support members are pivotally attached to a horizontally disposed support beam (5), the arrangement being hydraulically operated and having a resp. cylinder (34, 34') interconnecting the support beam and support members for securing the support members in a lowered position wherein said members provide a rigid and non-pivoting extension of the support beam.
