Abstract (en)

Protection element for preventing the ingress of water in a wall and for improving the discharge of water from a wall made of bricks (15). The protection element is made of plastic or metal and it comprises a bottom plate (1) with a length equal to that of a number of bricks and a width which is substantially the breadth of a brick. The bottom plate is provided at the longitudinal edges (2,3) with perpendicularly flanged longitudinal members (4,5) bent in opposite directions and provided at the endwise edges (6) with lateral walls (8,9), of which the one (8) is provided along the free edges (10,12) with outwardly flanged cover edges (11,13) which may be U-shaped and which, when placing the elements in a wall, fall over the free edges of the lateral wall of the adjoining element. A separate guide plate (23) may be used for sealing the cavity. <IMAGE>
