Abstract (en)

[origin: EP0737791A1] Points (32) connect a first section of the track (24) alternatively to one of two or more branch sections (32",35"). After a partition-section has entered one branch, a controller changes the points over to a second branch. This can have a detector in each branch, activated by a particular portion of a partition-section and operating the points. Bogies on the sections can guide them along the track and activate the detectors by their rollers.
