Abstract (en)  
[origin: EP0737795A2] The roll-up sheet has kinks (L) stamped into it parallel to the winder axis. It possesses a bending moment in the roll-up direction so that it has an edged shape at the roll (8) and a corrugated surface (W) when unwound. The bottom of the sheet has a reinforcement (E0) in the form of a roll inside which is a core. The material is between 0.01 and 0.05 mm thick, with imprinted kinks spaced apart by between 7 and 20 mm.
