Abstract (en)

[origin: EP0588056A2] A device (30) for processing films to produce pictures having an input station (31) to permit the input of data to indicate the order in question and an output and/or filling station to permit the insertion of the processed pictures and the associated film into a photograph pouch. To make it unnecessary to return the photograph pouch after filling to the order pouch (40) containing data relating to the processor and the customer, the device has an image scanner (33) for photographing the customer-related data which is entered on an order pouch (40) which belongs to a film to be processed. On the outside, the image scanner (33) is provided with a data processing device (34) and is connected via the latter to a printer (35) for printing the image data which contain the customer-related data. <IMAGE>
