Abstract (en)
The present installation comprises an observation and intervention device destined to be assembled in a space to be watched over. In a rotative container (1), controlled by an engine (7), are assembled on a support plate (12) mobile with respect to the container under the control of an engine (11), a videocamera (15), a laser sight device (14) and a mirror (13) for a laser ray of intervention (8). A checkpoint outside the space watched over receives the images collected by the videocamera and permits to sight a target in this space. The laser of (power) permits then to intervene against this target, the ray of this laser being reflected by the mirror (13) in the same direction of that of the sight of the device (14). <IMAGE>
