Abstract (en)
[origin: WO9612431A1] A garment hanger has a second frame portion of a supporting frame for maintaining the shape of a shoulder portion, in which the second frame portion vertically swings with respect to an extension direction of a first frame portion to select a narrow plane during storing the garment and a wide plane during displaying it as an area for supporting the shoulder portion of a garment, and a height of an outer end is varied during the swinging of the second frame portion to preserve the original shape of the garment even though the portion for supporting the shoulder portion is varied.
