Abstract (en)

[origin: WO9614645A1] A fractionated-rectification high-voltage transformer including a voltage-boosting secondary winding (4) of which at least two output diodes (7', 9') connected to two different stages (4a, 4c) of the secondary winding are positioned on the same level and spaced from the potentiometric unit (6) forming part of the insulating housing (1). The transformer may be used in a television set cathode-ray tube power supply.
