Abstract (en)  
[origin: SE502128C2] The clamping device includes a contact section attached to a conductive section by a clamping [3] by turning a switch [4] supporting the contact section. The clamping part is connected to a shaft [5] which is arranged to be gripped and held by a gripping device [6] which comprises a displaceable tightening part [7] to grip the shaft against contact devices [8] included in the gripping device. The contact devices includes at least one cylinder [9] with its axial direction arranged crosswise to the axial direction of the shaft section, the tightening part being pressed against a plane surface [10] of the shaft section.
