Abstract (en)

The joint has first and second pins (4,4') attached to two adjoining links (2,2'). Connecting elements (3) join the two pins together. The joint is completely covered by a plate (1) which also covers the edges (10,10') of the adjacent links, regardless of their rotation. The cover plate is held in place by an insert (5) which fits between the two pins and grips them. The pins are connected to the two links by passing through holes (12') in lugs (11',13'). The connecting elements which join them together are in the form of pierced sleeves with holes for both pins.

Abstract (fr)

Le dispositif d'articulation reliant entre eux les maillons composant un bracelet non extensible comporte des première (4) et seconde (4') goupilles attachées, la première à un premier maillon (2), la seconde à un second maillon (2') faisant face au premier, et des organes de liaison (3,3') reliant les première et seconde goupilles. Le dispositif est entièrement recouvert par une coiffe (1) entourant les maillons, la coiffe recouvrant en outre au moins les bords (10,10') desdits maillons quel que soit l'angle de rotation de ceux-ci. La coiffe (1) est maintenue en place par un insert (5) la traversant et venant se cranter entre les première et seconde goupilles. Le dispositif permet de relier entre eux plusieurs maillons formant un bracelet portant une montre par exemple. <IMAGE>
